ONECHECK INC. · TIPS GLOBAL DELEGATION PROGRAM · SEPTEMBER 2026

Online has cookies. Stores have blind spots.

OneCheck makes physical space measurable.

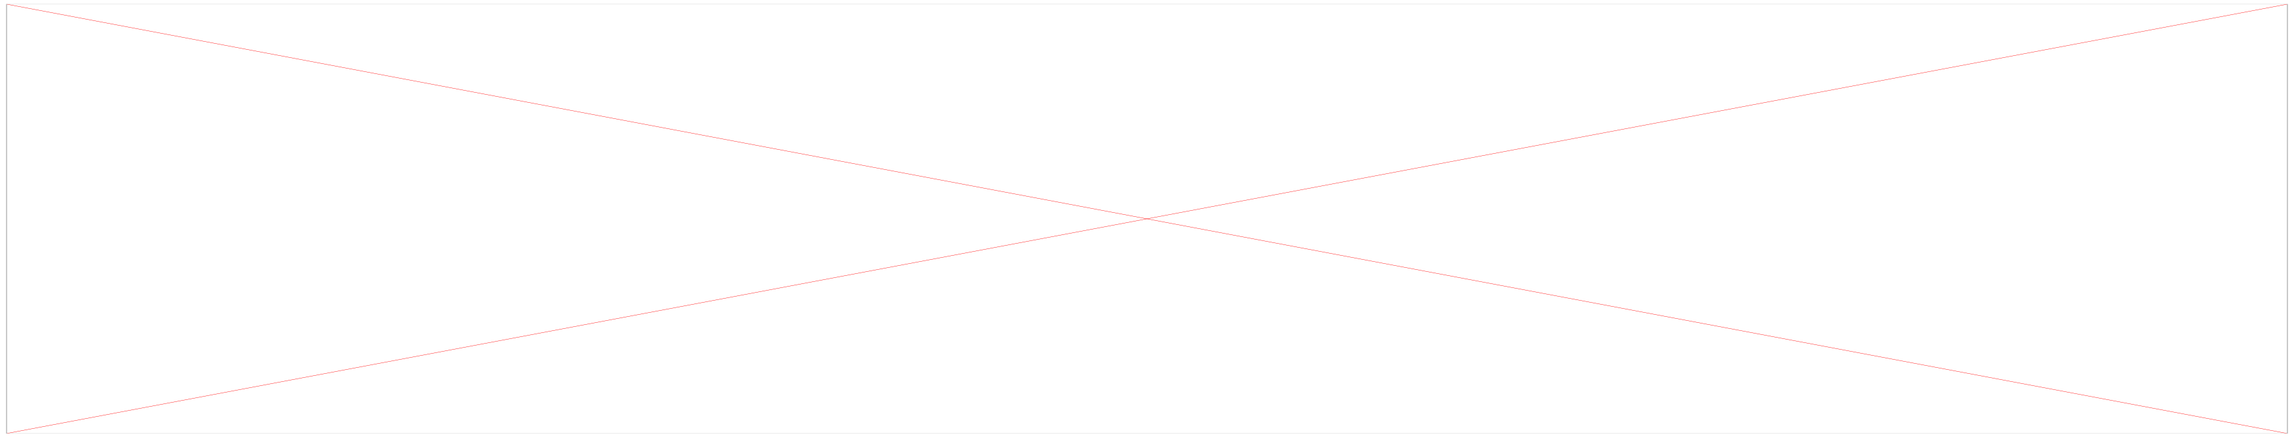

We turn precise in-store movement into retail intelligence, operational decisions, and accountable media.

Live replay — 40 real carts, measured position by position

T*** Store, Kanagawa · June 28, 2026, 12:00–12:03 · played at 6×

Physical retail measures footfall and transactions, not the behavior in between.

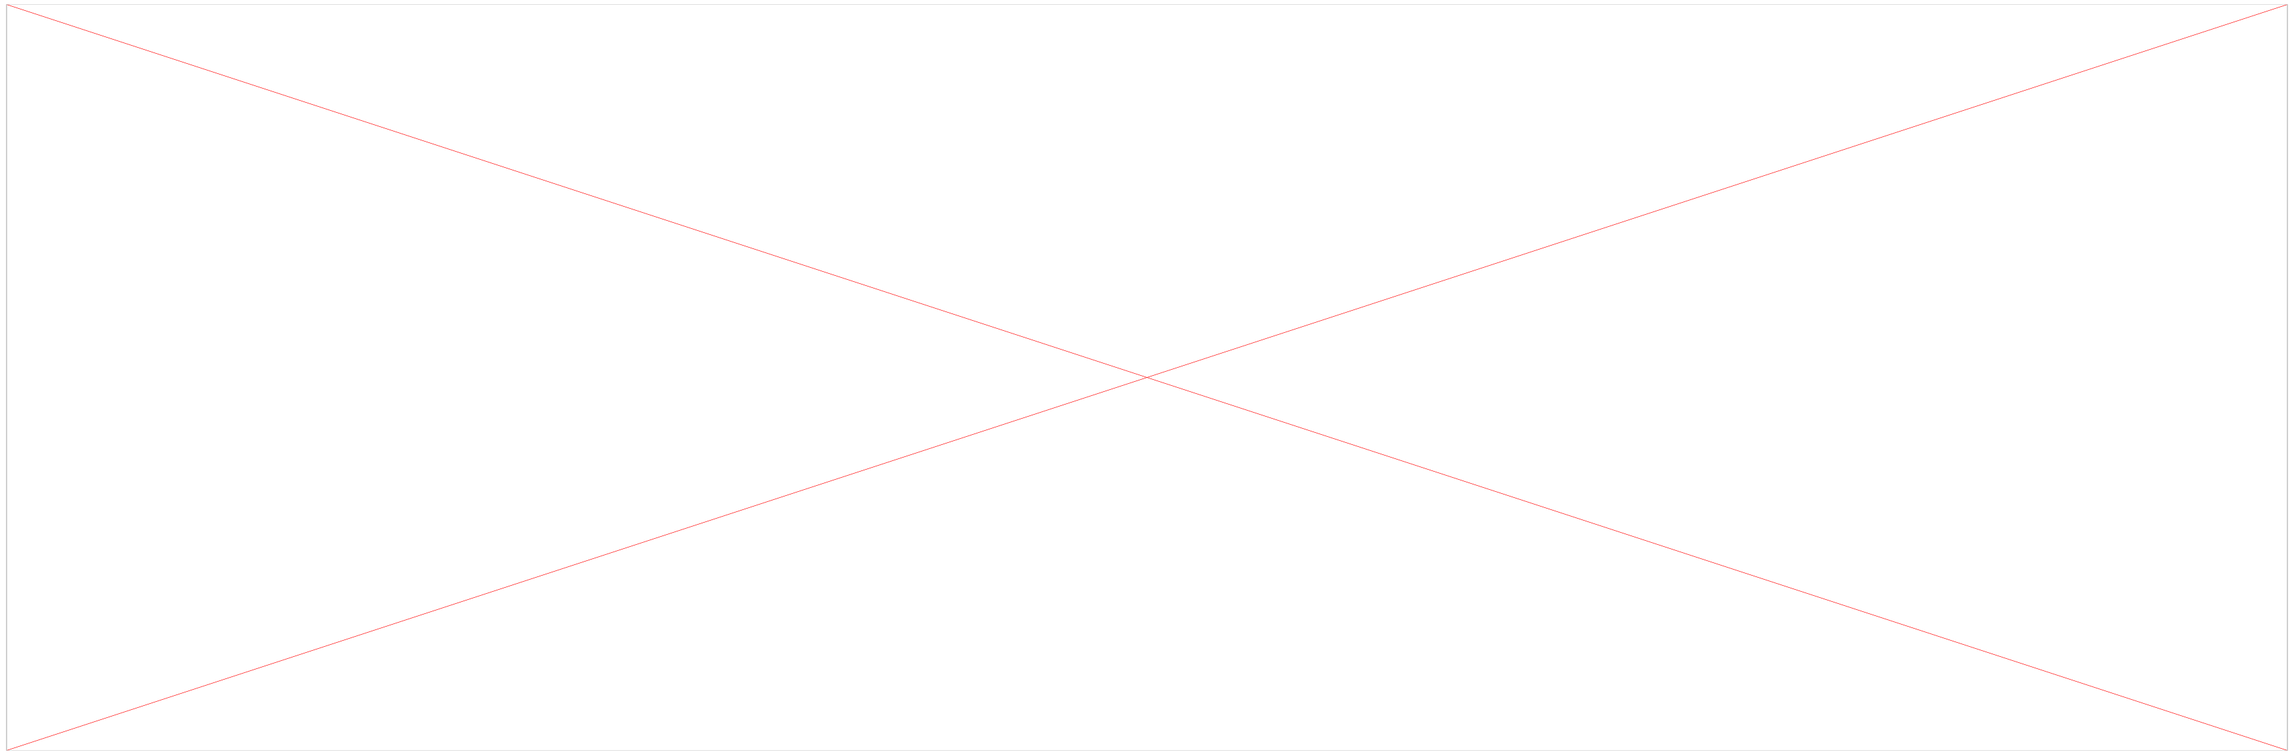

THE ONLINE PLAYBOOK, PROVEN ON COOKIES

Recommendation engines on cookie data built the online giants.

And none of it crosses the store door. Offline offered them no session, no path, no cookie — the biggest revenue engines on earth stop at physical retail.

Ad-revenue shares per public filings; Amazon and Netflix recommendation shares per company and analyst reports.

We close that gap today — every layer measured, in live stores.

Same shape as an online cookie.

So the recommendation, ranking and attribution algorithms the online giants already proved — the ones behind those eighty and ninety-seven percent revenue lines — run here too. On physical movement.

Panels 2–4: measured data, T*** Store, Kanagawa — track slice of June 28, 2026; visit of June 27, 2026; reach from 21,624 tracked sessions, Jun–Jul 2026. Panel 1 schematic; accuracies are typical published ranges.

One S1ght connects physical journeys to enterprise decisions.

Location events become more valuable when linked to the systems businesses already use.

ENTERPRISE DATA

BUSINESS APPLICATIONS

Measurable action

Store and asset operations
Audience and media measurement
Context-aware experiences

FROM OBSERVATION TO ACCOUNTABILITY

Connect exposure and movement to outcomes—not just a count at the door.

Running UWB takes three things — and coverage is the hard part.

01 Phone · or our tag

UWB chip

It arrives two ways: built into the phone, or shipped by us as a tag for carts, badges and assets.

02 OneCheck

Anchors in the space

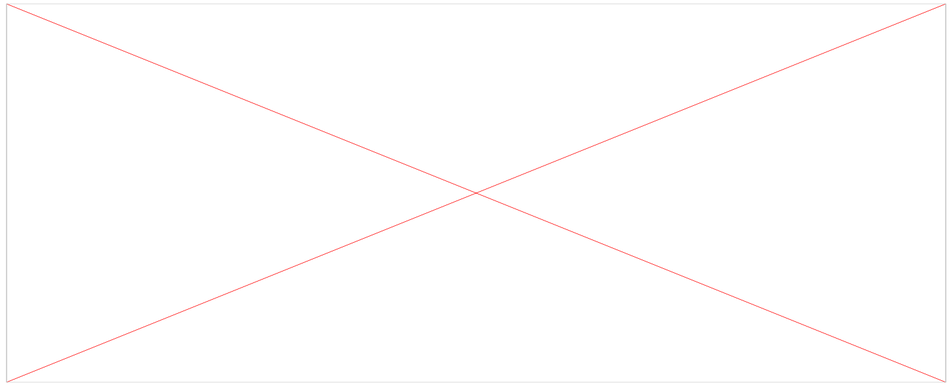

The indoor satellites. We supply, install and calibrate them.

03 OneCheck

Geospatial data platform

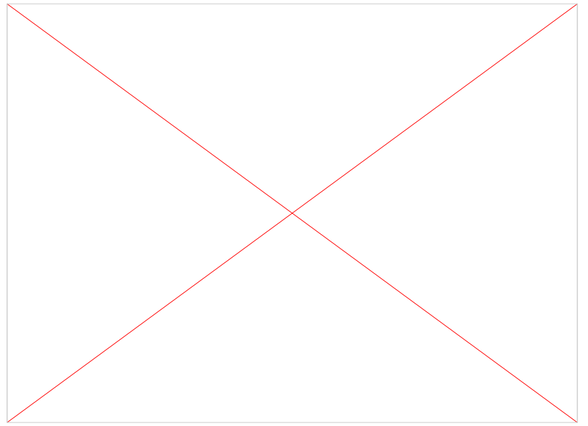

Ties anchors to the chip and turns raw signal into a real position on a real floor plan.

POSITIONING ERROR, TYPICAL

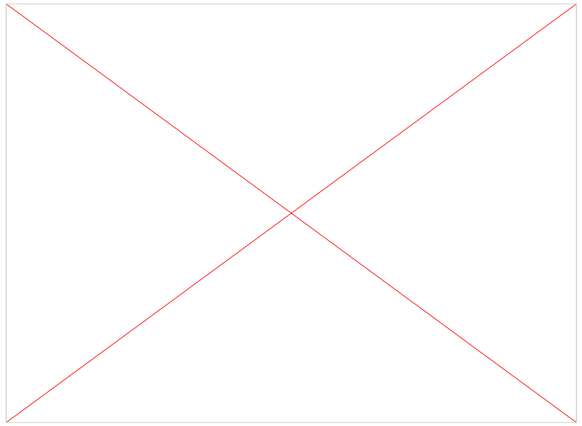

We can supply all three — the chip either arrives in the phone, or ships from us as a tag.

COVERAGE — ON OUR OWN STORE PLAN

Typical vendor — one cell

tracking ends at the edge

OneCheck — multi-cell hand-over

whole store · few can run this

Coverage overlays are schematic, drawn on our measured T*** Store plan and one real 15-minute track; single cell ≈15 m × 15 m. Positioning accuracies are typical published ranges.

Phones just joined UWB — carrying the cookie with them.

SEPT 2026

Apple opens phone UWB — beta live
An indoor GPS — but it only works with anchors in the space, the indoor satellites. We deploy them, and we run the cells.

Apple now, Android expected next (Nov 2026) — the phone in everyone's pocket becomes the sensor.

Track the phone, not the silhouette

We are not an ad-tech company.

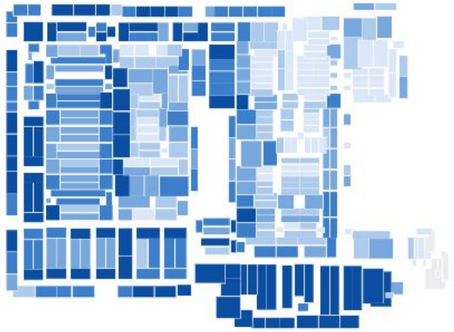

We are the offline data layer the online giants could never build — their engines stopped at the store door because precise indoor location did not exist. Now it does, and the anchors are ours.

Phone UWB: Apple developer beta, September 2026 — requires in-space anchors. Android support timing not announced. Cookie chips and screen offer illustrative.

Retail is the wedge — the same four layers, any indoor space.

RETAIL · THIS DECK

zone reach across 21,624 sessions

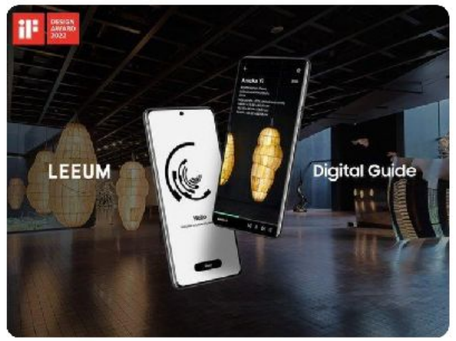

journeys, layouts and media

Supermarkets, measured

CULTURE · LEEUM MUSEUM, SEOUL

UWB indoor audio guide

commentary starts at the work

The exhibit speaks

HEALTHCARE · LONDON, CANADA

staff and equipment tracking

the right people, found in seconds

Staff & resources, findable

INDUSTRY · SMART FACTORY

logistics and worker tracking

geofenced alerts on danger zones

Flow, with a safety fence

Sense, Position, Event, Decide — the same four layers, deployed into every one of these. No borders: the solution runs in any country where phones carry UWB.

Live PoCs with major retailers in Korea and Japan.

Retail panel: measured zone reach, T*** Store, Kanagawa. Deployments and pilots delivered by OneCheck; hospital and factory clients unnamed by agreement.

Deployments generate revenue today. Analytics adds a recurring layer.

Enter the U.S. through partners with access to multi-site operators.

Prioritize organizations that can sponsor a paid pilot and support a repeatable rollout.

01

STRATEGIC ACCESS

Investors and strategics

Introductions to operators, commercial sponsorship and growth capital.

02

PILOT OWNERSHIP

Multi-site operators

A flagship U.S. site, an accountable business owner and an agreed success measure.

03

LOCAL DELIVERY

Integration partners

POS, signage and store-system integration, installation and ongoing deployment support.

TARGET OPERATOR EXAMPLES

Amazon / Whole Foods · Walmart · Costco

Target examples only—not announced customers or partnerships.

Built by operators in UWB, global commerce and data science.

Strategy Office, Xinapse
Head of Strategy Consulting, GOP

Convert U.S. partner access into a paid pilot and a rollout decision.

A 180-day commercial plan with a defined deliverable at every stage.

DAY 14

Qualify

Confirm partner fit and secure written interest.

Written interest

DAY 30

Scope

Run a technical workshop; agree scope and success criteria.

Agreed pilot scope

DAY 90

Launch

Sign a paid pilot agreement and begin measurement.

Signed agreement

DAY 180

Expand

Review pilot results and make a multi-site or channel decision.

Rollout decision

EXECUTION OWNER Kevin Choi · Pilot architecture, integration, data delivery and technical acceptance
